#### Top 5 Priority Issues

Serve scaled images	F (0)	<b>✓</b> AVG SCORE: 70%	IMA GES	HIGH
Optimize images	F (23)	<b>✓</b> AVG SCORE: 74%	IMA GES	HIGH
Leverage browser caching	F (25)	<b>✓</b> AVG SCORE: 63%	SERVER	HIGH
Defer parsing of JavaScript	B (87)	▲ AVG SCORE: 71%	JS	HIGH
Minify JavaScript	A (90)	♦ AVG SCORE: 90%	JS	HIGH

#### How does this affect me?

Studies show that users leave a site if it hasn't loaded in 4 seconds; keep your users happy and engaged by providing a fast performing website.

As if you didn't need more incentive, Google has announced that they are using page speed in their ranking algorithm.

#### About GTmetrix

We can help you develop a faster, more efficient, and all-around improved website experience for your users. We use Google PageSpeed and Yahoo! YSlow to grade your site's performance and provide actionable recommendations to fix these issues.

#### About the Developer

GTmetrix is developed by the good folks at **Carbon60**, a Canadian hosting company with over 24 years experience in web technology.

https://carbon60.com/

### What do these grades mean?

This report is an analysis of your site with Google and Yahoo!'s metrics for how to best develop a site for optimized speed. The **grades you see represent** how well the scanned URL adheres to those rules.

Lower grades (C or lower) mean that the page can stand to be faster using better practices and optimizing your settings.

#### What's in this report?

This report covers basic to technical analyses on your page. It is categorized under many headings:

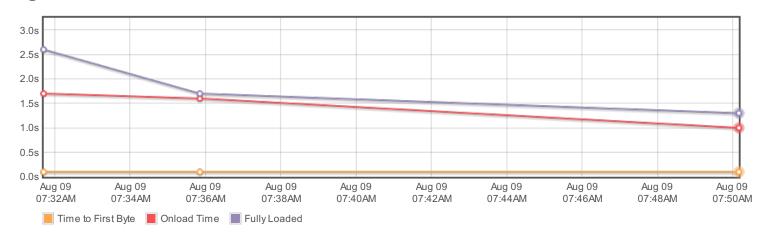

- Executive: Overall score information and Priority Issues
- **History:** Graphed history of past performance
- Waterfall: Graph of your site's loading timeline
- Technical: In-depth PageSpeed & YSlow information

These will provide you with a snapshot of your performance.

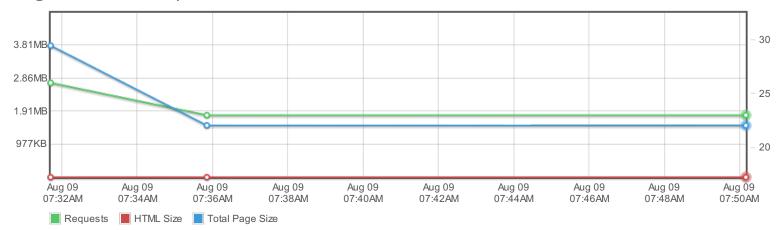

## History

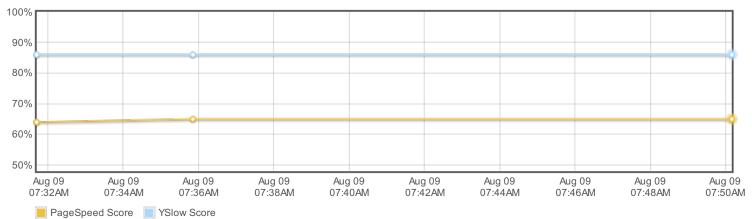

## Page load times

#### Page sizes and request counts

## PageSpeed and YSlow scores

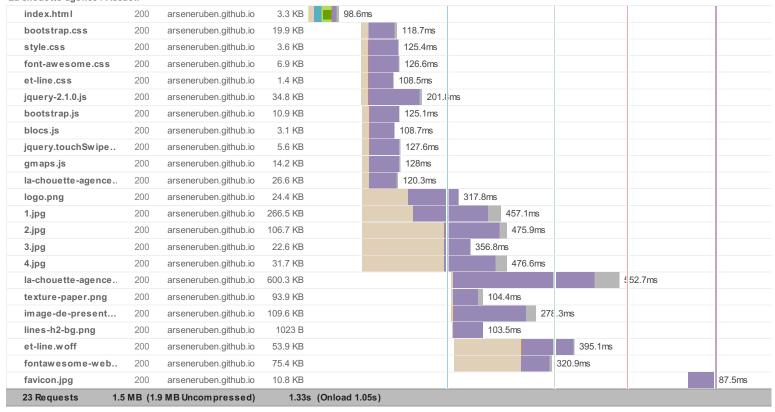

### Waterfall Chart

The waterfall chart displays the loading behaviour of your site in your selected browser. It can be used to discover simple issues such as 404's or more complex issues such as external resources blocking page rendering.
